

Abel Teame

Senior Full-Stack Engineer — Next.js · React · Node.js · TypeScript · Claude Code

Addis Ababa, Ethiopia · +251 987 971 218 · abelteame22@gmail.com · linkedin.com/in/abelteame · github.com/JulesWinnfield22 · abelteame.dev

Summary

Senior full-stack engineer with 5+ years shipping production web applications for logistics, healthcare and insurance. Builds end to end on Next.js 16 and Node.js: Server Components, authentication, Prisma data models and Docker deployments, plus large React 19 front ends with real-time features. Uses Claude Code daily with CLAUDE.md project rules, MCP servers and AI-generated tests, and every AI-written change passes the same type checks, tests and code review as hand-written code.

Takes full ownership and delivers on time. Sole developer of ChiNet's Next.js website and CMS, rebuilt a 236K-line legacy system in 2 weeks, and led a team of 3 whose government and enterprise platforms are still in production. Works directly with product, design and backend teams to turn requirements into tested features on tight deadlines.

Technical skills

Area	Skills
Full stack	Next.js 16 (App Router, Server Components, middleware), React 19, Node.js, Express, NestJS, TypeScript, JavaScript (ES6+)
Databases and state	Prisma, PostgreSQL, MySQL, MongoDB, TanStack Query, Zustand, Redux
AI-assisted development	Claude Code, Cursor, GitHub Copilot, v0, MCP servers (Figma, Playwright), CLAUDE.md project rules
Auth, real time and payments	Better Auth, Socket.IO, Firebase Cloud Messaging, PWA (Workbox), Chapa

Area	Skills
React ecosystem	TanStack (Router, Form, Table, Virtual), React Hook Form, Formik, Context API, React Native (Expo)
UI and styling	Tailwind CSS, shadcn/ui, Material UI, Tiptap, React Three Fiber, GSAP, Motion, class-variance-authority
Testing	Vitest, Jest, React Testing Library, Playwright, Cypress
Delivery and tooling	Docker, PM2, Vite, Webpack, Biome, Git, GitHub, GitLab, Agile/Scrum
Performance and quality	Core Web Vitals, code splitting, lazy loading, image optimisation, accessibility (WAI-ARIA), SEO
Also ships	Vue 3, Nuxt, Pinia, Reka UI, Astro

Experience

Frontend Developer — ChiNet LinkTech PLC

Addis Ababa, Ethiopia · December 2025 – Present

Main frontend developer for ChiNet's logistics products, and sole full-stack developer of the company website and CMS.

Company website and CMS — Next.js 16, full stack (chinnetlink.et)

- Sole developer, from architecture to production: Next.js 16 App Router with React 19 and the React Compiler; about half the components are React Server Components.
- Back end: Prisma on MongoDB for posts and users; Better Auth sessions with role checks in Next.js middleware guarding the admin area; Tiptap rich-text editor with image uploads.
- Deployment and SEO: Dockerised standalone Node.js build run with PM2; server-rendered pages with JSON-LD structured data.
- Front end: 3D globe in React Three Fiber, with GSAP and Lenis scroll animations.

Logistics platform — React 19 (app.chinnetlink.et)

- Main contributor (384 of ~550 commits) to a multi-role platform for shippers, carriers, brokers, agents and admins, plus a freight marketplace: ~600 TypeScript files and 200+ routes.
- Architecture: Vite, React 19 and TypeScript; TanStack Router file-based routing with a route group per role, route guards and silent token refresh; each feature keeps its API layer, components and navigation next to its routes.
- State: TanStack Query for server state (queries in 110+ files, mutations in 75+); Zustand stores for auth, chat, payments, notifications, theme and language.
- Real time: Socket.IO hooks for live shipment tracking, marketplace chat, bid offers, payment status and notifications; Firebase Cloud Messaging push; public links for sharing live tracking.
- Installable PWA with Workbox caching, Chapa payment checkout, Ethiopian calendar support and English/Amharic translations.
- Quality: shared TanStack Form system in 80+ forms; Vitest and React Testing Library unit tests, Playwright end-to-end tests, Biome for linting and formatting.

Transport Management System rebuild — Vue 3 (chinet-tms.et)

- Rebuilt the legacy TMS (Vuex, Bootstrap, Vuetify and PrimeVue) in **2 weeks** on Vue 3, TypeScript, TanStack Query, Form and Table, Pinia and Tailwind CSS 4, reusing the React platform's architecture.
- **62% smaller codebase** (236K → 89K lines) while growing from 441 to 560 components, and **half the runtime dependencies** (36 → 18) after replacing three UI libraries with one Tailwind CSS layer.
- Introduced TypeScript, Vitest and Playwright to a codebase that had none, and documented the architecture in ARCHITECTURE.md and CLAUDE.md so developers and AI agents follow the same conventions.

Senior Frontend Developer & Team Lead — Medco Technology Solutions

Addis Ababa, Ethiopia · October 2023 – November 2025

- Led and mentored a team of **3 frontend developers**; owned technical decisions, ran code reviews and set engineering standards.
- Set the shared Vue 3 architecture across 8 product codebases, including a `useApiRequest` composable built from scratch that replicated TanStack Query's core behaviour (request lifecycle, loading and error states, caching).

- Worked with Product, Backend (Java/Spring) and Design to turn business requirements into tested features on tight deadlines; set onboarding standards that made new hires productive in their first week.
- Delivered government and enterprise platforms that won competitive bids and are still in production:
 - **Kenema Pharmacies Enterprise** (rx.kenemapharmacy.com): 500+ component pharmacy system with Google Maps branch locations, PDF and Excel reporting, Ethiopian calendar dates and idle-session logout.
 - **Community-Based Health Insurance (CBHI)**: national enrollment platform with Chapa online payments and ApexCharts dashboards.
 - **Foreign Employment Term Assurance Platform for Nyala Insurance** (niscofetap.com): agency platform with generated PDF policy documents that reduced manual processing errors.
 - **Life/Medical Insurance & Claims Management System**: redesigned claims platform built on Tailwind CSS.
 - **Alert Hospital Pharmacy Management System**: dispensing, inventory and patient-safety workflows, live at Alert Hospital.

Frontend Developer — Kulfinet

Addis Ababa, Ethiopia · September 2020 – December 2022

- Built and maintained a buyer-seller marketplace (kulfinet.com) serving **1,000–1,500 monthly active users**: Vue.js front ends on a NestJS and PostgreSQL back end.
- Improved page load times with code splitting and lazy loading; built responsive layouts for mobile and desktop.

Frontend Developer — RENOSTAR

2018 – 2019

- Migrated legacy Joomla sites to WordPress, then moved selected projects to Vue.js.

AI-assisted development with Claude Code

Uses Claude Code daily across the full development loop. Every AI-written change goes through the same type checks, tests and code review as hand-written code.

- **Agentic coding:** Claude Code and Cursor for feature work, refactors and multi-file changes, working from a written plan and reviewing every diff before it is merged.
- **Project rules files:** maintains CLAUDE.md and ARCHITECTURE.md in production repos (such as the ChiNet TMS rebuild) that encode module structure, TanStack Query and Form patterns, naming and testing conventions, so generated code matches house style.
- **MCP servers:** Figma MCP and v0 to scaffold React, Tailwind CSS and shadcn/ui components from designs, then refined by hand for accessibility, typing and edge cases; Playwright MCP so the agent checks UI flows in a real browser.
- **AI-assisted testing:** generates Vitest and React Testing Library unit tests and Playwright end-to-end specs.
- **AI code review:** GitHub Copilot code review as a first pass on pull requests, ahead of human review.

Projects

Marbarak Trading CMS — full stack, Node.js (marbaraktrading.com)

- Designed and deployed a full-stack CMS that lets non-technical staff update website content without a developer.
- **Stack:** Vue.js, Express.js, Node.js, MongoDB

Enterprise Form System — React & Vue 3

- Built at ChiNet on TanStack Form with matching React and Vue 3 implementations: the React version runs 80+ forms in the logistics platform and the Vue version powers the TMS rebuild.
- Zero-dependency validation engine replacing Zod/Yup: every rule is a plain `(value) => [boolean, string]` function, with 30+ built-in validators, i18n-ready messages, cross-field rules and per-row validation for dynamic lists.
- Unsaved-changes guard on in-app navigation and tab close, backed by a custom `hashForCompare` that handles File, Date, nested objects and arrays where TanStack Form's built-in check fails.
- Data hygiene: edit-mode sync that patches only changed fields, payload sanitisation, auto-focus on the first invalid field and field-state cleanup on unmount.
- **Stack:** React, Vue 3, TanStack Form, TanStack Router, TypeScript

Modal-X — open-source modal library for React and Vue · 2023 – Present

- Published [@customizer/modal-x](#) for Vue 3 (4,400+ downloads in the last 18 months) and [@customizer/react-modal-x](#) for React 18+, built on Zustand.
- A Vite plugin scans modal files (`.mdl.vue` , `.mdl.tsx`) and generates a typed registry, so modals open by name through a type-safe, Promise-based API.
- Used in production across 8 Medco products and ChiNet's apps; also built a VS Code extension that jumps from `openModal( 'Name' )` to the modal's source, and an Astro documentation site.
- **Stack:** React, Vue 3, TypeScript, Zustand, Vite

Mobile Insurance App — Lemobile · 2025

- React Native (Expo) app for phone insurance: policy details, a guided claim-filing flow, and on-device hardware checks (screen, touch, microphone, speaker) with IMEI capture.
- Expo Router, React Hook Form, Reanimated animations and EAS builds for Android and iOS.
- **Stack:** React Native, Expo, TypeScript, Java, Spring, MySQL

Personal portfolio ([abelteame.dev](#)) · 2026

- Static Astro site with GSAP, Lenis and Barba.js scroll animations and page transitions, and no framework runtime.

Education

B.Sc. in Software Engineering — Microlink Information Technology and Business College, Addis Ababa · 2016 – 2020
